

Resolution: same harness, three scales

ESM-1b zero-shot, ClinVar missense (all genes).
The ceiling this harness climbs toward.

Panel B: ClinVar workshop set — 250 P + 250 B across 400 disease genes; Brandes-matching label scope (canonical text + Conflicting via ClinSigSimple), canonical-isoform-validated. LLR AUROC 0.929 (CI95 0.906–0.950) — within noise of Brandes 2023's 0.905.
